

Moving Parts Digger

1. Before you get started you'll need to transfer the digger images to cardboard. You can just glue the paper onto card (use a gluestick) or trace the image on to card by holding it up against a window on a sunny day.
2. Colour-in the digger and digger parts.
3. Cut the pieces out and punch holes where marked.
4. Attach the parts using split pins (brads)

Additional Ideas:

** cut up some photos and paste them on the digger so that the kids could be in the driver's seat!
